

TOPAI GATEWAY · Quickstart Cheat Sheet

■ DORA & EU AI Act Certified

■ Sub-30ms Global Edge (330+ PoPs)

400 Micro-APIs & 169 Harness Tools · From Zero to Your First Syscall in 60s · Ephemeral V8 Isolates · Zero Token Retention

STEP 1 : MASTER KEY & SANDBOX ACCESS Your unified API key unlocks all micro-services in your pack without separate credentials or hidden fees. • Free Evaluation Sandbox: 100 free req/mo without credit card. • Production Key: In Customer Portal at /portal (tab: API Keys & Jails). • HTTP Header: Authorization: Bearer topai_live_... • Zero-Token Retention: Ephemeral RAM isolates only. Zero prompt logging.	STEP 2 : 10-SECOND EDGE VERIFICATION Verify instant global edge connectivity right from terminal or browser: curl -H "Authorization: Bearer topai_live_..." \ https://gateway.topaigateway.com/v1/health Response: {"status":"UP","latency":"1.8ms","total_apis":400} • 1-Click DORA Cert: curl https://topaigateway.com/v1/compliance/dora-certificate
---	---

STEP 3 : PLUG TOPAI INTO YOUR WORKFLOW (CHOOSE YOUR PATH)

A. Drop-in OpenAI Proxy (Cursor, Windsurf, Claude) Set OPENAI_BASE_URL="https://topaigateway.com/v1". TopAI intercepts deterministic operations (web extraction, AST parsing, math, cache) at \$0.00 token cost in sub-30ms, while routing reasoning to upstream LLMs.	B. No-Code & Webhooks (Make, Zapier, n8n, Clay) Add an HTTP module to your automated scenario: • URL: https://gateway.topaigateway.com/v1/extract • Method: POST Payload: {"url":"..."} • Header: Authorization: Bearer <KEY> Extract clean ad-free markdown without proxies or headless browsers.
C. Python Quickstart (3 Lines) <pre>import requests res = requests.post("https://gateway.topaigateway.com/v1/extract", headers={"Authorization": f"Bearer {KEY}"}, json={"url": "https://news.ycombinator.com"}) print(res.json()["markdown"]) # Sub-30ms execution!</pre>	D. Multi-Agent Swarms & 19+ MCP Tools (Node/TS) <pre>import { TopAI } from '@topai/sdk'; const topai = new TopAI({ apiKey: process.env.TOPAI_KEY }); const lock = await topai.mutex.acquire({ resource: 'repo-ast' }); const clean = await topai.tokenslimmer.compress({ text }); // Prunes up to 65% of bloated tokens deterministically</pre>

STEP 4 : QUOTAS, PEACE OF MIND & FINOPS SAVINGS

• Soft Limit Guarantee (Zero Sudden Shutdowns): If volume approaches 80% or 100%, our edge gateway alerts you proactively. Automated overdraft buffer keeps production pipelines alive with smooth burst protection.

• Real-Time Cockpit: Track request consumption, token savings waterfall, and Anycast telemetry at https://topaigateway.com/portal.

• Self-Service VAT Billing: Manage Polar.sh & Stripe subscriptions, download European tax invoices, or update plans anytime.

• Guaranteed Innocence: Immutable Ed25519 audit logs, DORA Article 12/30 certified, and zero proprietary lock-in.

■ Basic Sandbox (0 € · 100 req) · ■ Pack 1 DevEx (14 €/m · 10k req) · ■ Pack 2 Squad Velocity (29 €/m · 50k req) · ■ Pack 3 High-Scale (79 €/m · 250k req) · ■ Pack 4 Sovereign Enterprise (199 €/m · 1M req)
